## Health is a normal state of the human being

Body (and psyche) is created to be healthy. Each disorder - physical or mental - arises due to internal imbalances, stress and toxins. Every body has its own healing mechanisms (eg immunity, wound healing processes, fighting microorganisms, repair of malicious replications of cancer cells, etc.). Medicines usually have only the effect they expect (see homeopathy, placebo). For good health, it is necessary not to give space to any negative or other ideas - that is the principle of right positive thinking. Whoever expects health will come to this. We are what we want to be.

Our spirit regulates our body and mind and keeps them healthy, durable, vital and powerful. This state supports positive thinking. If faith is lacking in healing, actual healing is not possible. You become a healthy person thanks to your efforts. The present state of the body and the psyche is an accurate picture of contemporary thoughts, which is reflected in their current state, because every thought through the subconscious endeavors to be realized.

A mind that can not control (it produces and maintains various negative and other inappropriate thoughts) weakens or blocks these mechanisms. The idea is the beginning of everything, it is a creative act. Positive thinking produces genuinely positive fruits - it activates the creative forces of the subconscious and the energy to realize them. Who has healthy thoughts can not be sick.

In some cases, personal contact and active collaboration with the help provider (eg treatment with hands, etc.) is necessary.

However, this assistance may not, for various reasons, be 100% effective and effective, even though maximum efforts, access and interest have been developed by the assistance provider. Every normal person (or animal or plant) has given a certain amount of energy throughout his life just for his existence, and if he manages to distribute it to others, he must logically expect to sooner or later get into the situation, when this energy is not enough for his own needs and problems arise.

As far yourself betimes realize arisen danger, which can display also birth big fatigue, decrease all sinews and act different disease, such in the extreme can come to article, when yourself already he shall not may alone this energy complete - recharge and will go round not with for oneself. This circumstance can be set in, if they do with energies chores amiss.

If you're using and dispense to its energy, logically to you will be absent, as far it won't you in adequate amount be complementary, accordingly it boost charge. Amount and quality their personal - full of life energies yourself everyone can in the appropriate manner be complementary for by other of resources (nature - plants, trees, animals, other people, reconnection, movement, meditation, pharmacies, etc.).

In such a case is appropriate to with by those activity for a season or absolutely be down, if they do status does not improve and return to historic status.

The psyche of man and the potential of the human brain (both hemispheres) are ready to work with energy and subconscious mind, however, in the event of longer-term activity, it is exhausting and there is a risk of congestion with all its consequences and consequences. This activity is not suitable for everyone, it requires preparedness and an exercise-acquired ability to manage these activities for an extended period without harm.

Under mention be sitionary also behind thinking, whether provision of their full of life beef (energies) has also adequate synallagmatic profit other forms energies (eg satisfaction from personal self fulfilment and feel like east role, due or gratification for help and the like) or not of and whether this activity stands out for effort, enervation and post factum difficulties and problems.
