

Health is a normal state of the human being

Body (and psyche) is created to be healthy

It has its own healing mechanisms (eg immunity, wound healing processes, fighting microorganisms, repair of malicious replications of cancer cells, etc.). Medicines usually have only the effect they expect (see homeopathy, placebo). For good health, it is necessary not to give space to any negative or other ideas - that is the principle of right positive thinking. Whoever expects health will come to this. We are what we want to be.

Our spirit regulates our body and mind and keeps them healthy, durable, vital and powerful. This state supports positive thinking. If faith is lacking in healing, actual healing is not possible. You become a healthy person thanks to your efforts. The present state of the body and the psyche is an accurate picture of contemporary thoughts, which is reflected in their current state, because every thought through the subconscious endeavors to be realized.

A mind that can not control (it produces and maintains various negative and other inappropriate thoughts) weakens or blocks these mechanisms. The idea is the beginning of everything, it is a creative act. Positive thinking produces genuinely positive fruits - it activates the creative forces of the subconscious and the energy to realize them. Who has healthy thoughts can not be sick.

This is a process whose length is directly dependent on the particular condition, the length of the escalation of the problem, the depth and severity of the problem being solved, and also the level of the target state to be achieved.

Effective help in solving any problem, especially health, is not a personal meeting because every change and solution of these problems takes place inside each person, that is, at the level of his subconscious, where the creative subconscious forces and energies are activated, and gradually make these positive changes.

In order to achieve a long-term or permanent improvement of the situation or to solve the problem, it is necessary in some cases to repeat the process or to correct it if necessary, especially in the complicated situations and problems. In some cases, personal contact and active collaboration with the help provider (eg treatment with hands, etc.) is necessary.
