

Reserve funds - budget solution - economy measure - source of savings

Reserve funds are single parts of the process increasing of your competitiveness and profit

Decrease in cost can acquire economy, budget solution or budget action, established into practice based on analyses, search and disclosure close to the vest possibilities and reserve in all likely area, even out of other larger cargo and investment.

Bold economy we reaches especially abridgment cargo in the area of materials, of raw materials, energy, employee, oversimplification and streamlining technological processes of fabrication, consumption, distribution, constructional change product and the like. Areas and sources with changes according needs as sponsor, according his specific and concrete requirements and actual circumstance.

Source of savings are in streamlining breeding abridgment cargo on fabrication and consumption:

- **increasing in productivity** / engineering betterment, change build, procedure, arithmetic process, innovations, know-how,
- **baser cargoes breeding** / better ones harnessing capacity, energy, personne, reserve funds material, transport, consumption,
- **other solution if possible** / harnessing hidden possibilities breeding and consumption, elimination competition from market.

Oblasti řešení úsporných opatření a skryté zdroje významných úspor

- **outputs** / structural design product, amalgamation functions for, oversimplification, diminution of a number of components, adaptation parameter, innovations product or services,
- **cost of generation** / productively production technology, goings, processes, operation, computerisation, robotization, hi-tech, processing, assembly operations, external coating, casing,
- **materials and crude material** / lesser consumption, more effective harnessing, replacements, referent, subcontracting, capital and reserves, cheaper crude material, clay, media, materials, components,
- **energies** / abridgment consumption, change, budget minded business, prevention getaway and wastage, energy are less ambitious technological goings and processes, are less operation and shorter,
- **personne** / board's labor force implementation automation, computerisation and robotization, into practice, amalgamation functions for, harnessing business hours and time, development engineering,
- **consumption and distribution** / oversimplification and streamlining distributions, distribution, consumption, carrying, of storing, administrative claim, installations, bringing up to date, corrections, servis, recycling
- **other source of savings** / communication, ad, industrial goods, harnessing technology, machines and apparatus, buildings, business, dominion, equipment utilization freeform in a way.

Areas and sources with changes according needs as sponsor, according his specific and concrete requirements and circumstance.

Budget solution and economy drive are advantageous for all, who need quick amp up its efficiency, competitiveness, prosperity and profit.

All these activities can be realized in relatively short time (according their costingness), during which time costs are only broken number that, what can be by this one acitivities carry off. The decision is purely for you.
